Students Information System (SVU IS)

The University Information System (SVUIS) is the backbone of the university’s information systems, where the main components of the virtual learning process are managed:

- Admission registration and management, including acceptance conditions.
- Manage student enrollment in courses within classes.
- E-payment.
- Technically, this system has been built and developed internally within the university’s IT department for the specificity of its business models.

Mail System

Postfix platform is used in mail system and Roundcube in web mail:

- Communications between students, teachers and university staff through a web interface or by using any email client software.
- Allows the use of mailing lists, which are created each term at the level of academic programs, courses and classes.
- Allows the use of mailing lists by the university staff to organize their work.

www.svออนไลn.org
Web Requests System

- Allows students to submit online their requests to obtain documents they need from the university.
- The possibility of students to submit objection requests of their exams or assignments grades.
- Follow up student’s requests

 позволяет студентам подавать свои запросы на получение документов, которые им нужны из университета.
- Возможность студентов подавать претензии на результаты их экзаменов или домашних заданий.
- Следить за студентами
Learning Management System

Based on the importance of e-content in the virtual learning environment, this system was found to manage the learning process through:

- Communications between students, teachers and university staff through a web interface or by using any email client software.
- Automatic courses creation and users enrollments based on SVUIS system.
- Support the use of various types of digital content (text, audio, video) in the courses creation and presentation.
- Provide a wide range of tools and components to organize courses and tracking educational activities like assignments, lessons, quizzes, forums, pages, miscellaneous files and others.

www.svunline.org
Virtual class

This system is the real equivalent to the traditional classroom where teacher and students meet to discuss and take information in a synchronized session, in which the system allows teachers to:

- Provide explanations required by voice or video and using possible explanatory tools (blackboard, highlighting, pens and drawings, colors etc).
- Share files and their desktops to all students.
- Chat with students in public or private text and voice chats.
- Record the session as a downloadable video file that can be attended when needed.
- Reversing roles in the session by transferring complete control to designated students if necessary.
Mobile application

Provides a range of academic and student services to students and teachers through mobile phones. Currently these services are:
- Registration on classes.
- Displaying classes timings.
- Displaying notifications about various activities.
- Adding discussions on courses.
- Adding discussions on student discussions.
- Display exam dates and telecenters.
- Display exam results.
- University news.
- Telecenters addresses and information.
